# DESIGN GOALS

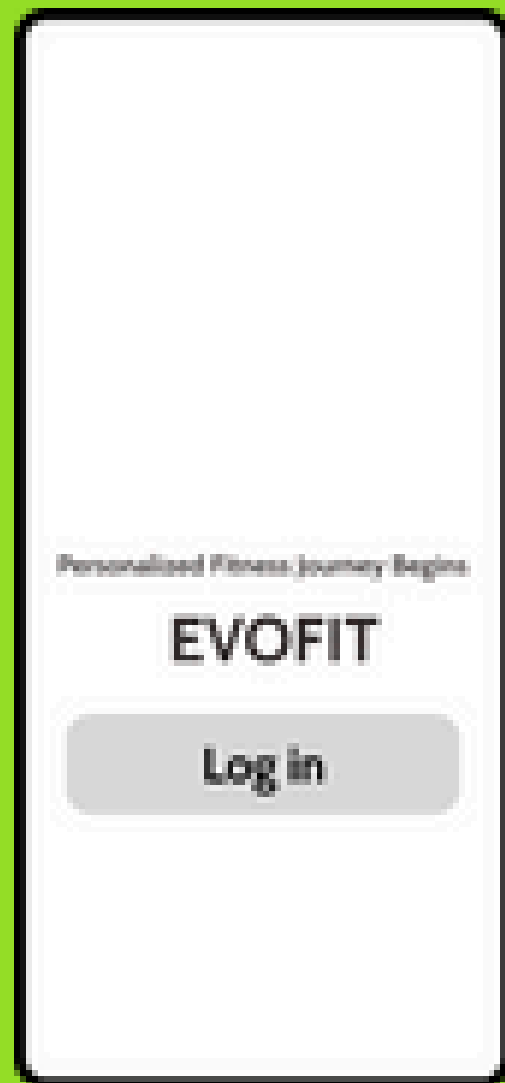

---

The primary functional goal is to simplify the creation and management of personalized workout and nutrition plans using AI. User experience goals include making the app intuitive, engaging, and supportive, ensuring users feel guided and motivated throughout their fitness journey. The app should also be accessible, allowing users with different fitness levels and dietary restrictions to benefit from it.

Building on the initial objectives, we will place greater emphasis on the security of user data and the protection of user privacy. At the same time, we will pay more attention to providing community support for users.
