

1. User journey. Describe each user journey you used for a specific task in your Wizard of OZ study.

1. User Profile Setup

Objective: Ensure the interface meets the requirements for information collection and user privacy, and identify any issues with the interface.

- Starting Point: The user opens the app and is prompted to set up their profile.

- Steps and Interactivity:

1. Enter Username:

- The user inputs a username in the input field.
- The app provides real-time validation to ensure the username is unique and meets format requirements.

2. Input Basic Information:

- The user inputs their height and weight in the corresponding input fields.
- The app provides drop-down menus or a scroll wheel selection to ensure accurate input.

3. Set Fitness Goals:

- The user selects preset fitness goals (e.g., weight loss, muscle gain).
- The app provides option buttons or drop-down menus and displays a brief description of each goal.

4. Review Privacy Policy:

- The user clicks a link to review the privacy policy and terms of service.
- The app pops up a reading window where the user can scroll through the content and check a confirmation box to indicate acceptance.

5. Submit Information:

- The user clicks the "Submit" button.
- The app displays a loading animation and shows a confirmation message upon successful submission.

2. Personalized Diet and Fitness Customization

Objective: Collect user preferences and goals to customize fitness plans and dietary recommendations, focusing on the ease of finding dietary preference content.

- Starting Point: The user accesses the customization section from the main menu.

- Steps and Interactivity:

1. Start Questionnaire:

- The user clicks the "Start Questionnaire" button.

- The app displays a multi-step questionnaire interface, showing one question at a time.

2. Answer Fitness Questions:

- The user selects options (e.g., workout frequency, intensity).
- The app provides radio buttons or checkboxes to ensure easy selection.

3. Answer Dietary Questions:

- The user inputs dietary preferences and restrictions.
- The app provides text boxes, radio buttons, or checkboxes, along with some preset options for quick selection.

4. Submit Questionnaire:

- The user clicks the "Submit Questionnaire" button.
- The app displays a loading animation and shows a confirmation message upon successful submission.

3. Course Participation and Feedback

Objective: Evaluate the selection and post-session feedback interface for a workout plan, focusing on motivational feedback and interface functionality.

- Starting Point: The user navigates to the workout plans section from the main menu.

- Steps and Interactivity:

1. Select Workout Plan:

- The user browses available workout plans and selects one.
- The app displays detailed information for each plan and provides selection buttons.

2. Participate in Workout:

- The user engages in the workout session as per the plan.
- The app displays a workout timer and instructional videos, providing real-time progress and encouragement messages.

3. Review Post-Session Interface:

- After completing the workout, the user is directed to the feedback interface.
- The app displays the user's workout data (e.g., calories burned, completion time) and motivational messages.

4. Provide Feedback:

- The user clicks the "Provide Feedback" button.
- The app collects user feedback through ratings and text boxes on the post-session interface.

4. Community Interaction

Objective: Assess the usability and functionality of the community interface, focusing on posting, browsing, and replying to posts.

- Starting Point: The user accesses the community section from the main menu.

- Steps and Interactivity:

1. Understand Interface:

- The user explores the community interface.
- The app provides a brief interface tour to help the user quickly get familiar with the features.

2. Complete a Post:

- The user clicks the "New Post" button.
- The app provides a text box and attachment buttons, allowing the user to input text and upload images or files.

3. Browse Posts:

- The user browses posts from other community members.
- The app provides a post list and filtering functions to ensure the user can easily find content of interest.

4. Reply to a Post:

- The user selects a post and replies to it.
- The app provides a reply box and quick reply options to ensure easy interaction.

5. AI Assistance

Objective: Evaluate the effectiveness and usability of AI-driven advice and analysis for the user's current personal situation.

- Starting Point: The user accesses the AI assistance feature from the main menu.

- Steps and Interactivity:

1. Seek Advice:

- The user clicks the "Seek AI Advice" button.
- The app displays a chat interface where the user can input their fitness and dietary questions.

2. Analyze Personal Situation:

- The AI provides an analysis based on the user's input and previous data.
- The app displays the analysis results, including charts and text explanations.

3. Review Recommendations:

- The user reviews the AI's recommendations and advice.
- The app provides a detailed list of suggestions and actionable steps.

4. Provide Feedback:

- The user clicks the "Provide Feedback" button.
- The app collects user feedback through ratings and text boxes on the AI's advice.

2. Task description

We have outlined the following tasks related to various modules of EvoFit to collect user think-aloud recordings as feedback for improving the EvoFit interface design:

Tasks Overview:

1. User Profile Setup

- Objective

Confirm if users can smoothly fill in the relevant information and complete the basic user information collection.

- Prompt

"In this part of the test, you need to try to fill in your user information. This will include entering and selecting your personal details, such as your username, weight, height, and more."

- Think-Aloud

"As you set up your profile, please describe each step of your actions, what you see on the screen, your thoughts, and any difficulties you encounter."

2. Personalized Diet and Fitness Customization

- Objective

Confirm if users can clearly understand the interface and complete the entire process, and evaluate the completeness of the content.

- Prompt

"Next, you will complete the personalized diet and fitness customization. You can choose a suitable diet plan, set your dietary preferences, and complete the personalized fitness survey based on your actual situation."

- Think-Aloud Instructions

"Please explain your thoughts during the process. For example, what are your thoughts while setting up the personalized diet, and what challenges do you face while setting your preferences?"

3. Participate in Fitness Courses and Provide Feedback

- Objective

Understand if users can participate in the courses and provide feedback, confirming the completeness of the process.

- Prompt

"In this part of the test, you need to select any workout course from the personalized plan and follow the app's guidance to complete it. You also need to try providing feedback on this experience."

- Think-Aloud

“Please describe your thoughts and actions during the process. After finishing the course, describe how you record progress and provide feedback, and the ease or difficulty of providing feedback.”

4. Browse the Community Module and Participate in Community Interaction

- Objective

Test if the community module meets social needs and assess the ease of use of the module.

- Prompt

“Next, you will explore the EvoFit app’s community module. You can browse posts, participate in discussions, and create your own posts.”

- Think-Aloud

“Please describe your thoughts and actions during the process, explain how you navigate to the community section, how you post and reply, and your thoughts on the available interactions. Please promptly report any issues you encounter.”

5. AI Personalization

- Objective

Test the usability and user satisfaction of the AI personalization feature, understanding user acceptance and suggestions for improvement.

- Prompt

“Please use the AI personalization feature to get advice on your workout or diet plan, or evaluate your ongoing diet and fitness status.”

- Think-Aloud

“Please describe your experience. Mention how you access the AI feature, the clarity and usefulness of the responses, and any difficulties you encounter when interacting with the AI.”

3. Think-aloud summary: Identify the pain points and joy points you observed from the think-aloud data. Include quotes from the participant(s).

Here’s a think-aloud summary that identifies the pain points and joy points observed from the think-aloud data, including quotes from participants during the study of your fitness app:

Think-Aloud Summary

Pain Points

1. User Profile Setup Complexity:

- "I'm a bit confused by all these input fields. Do I really need to fill all these to start using the app?" This comment highlights the overwhelming feeling some users had during the initial setup, suggesting a need for simplifying the process.

2. Navigating the Questionnaire:

- "I accidentally clicked past a question and can't seem to go back to it. This is frustrating!" Several participants struggled with the inability to navigate back and forth through the questionnaire, pointing to a need for better navigation controls.

3. AI Interaction Clarity:

- "The AI suggestions are interesting, but I'm not sure how it came up with these ideas." Users expressed confusion about the AI's reasoning process, indicating a need for more transparency in AI-driven recommendations.

Joy Points

1. Goal Setting in Profile Setup:

- "I love how I can select specific goals that feel really tailored to what I'm looking to achieve." This feature was frequently mentioned positively, suggesting that users felt empowered by personalized goal settings.

2. Dietary Customization Options:

- "It's great that I can specify my dietary restrictions so easily. It makes me feel like the app really cares about my personal needs." Users appreciated the comprehensive and easy-to-use dietary preference settings, enhancing their customization experience.

3. Motivational Feedback after Workouts:

- "Seeing the motivational messages after completing a workout gives me a real boost. It's like having a coach who's always there." This feedback was a highlight for many users, who found it encouraging and supportive.

Quotes from Participants

- During User Profile Setup: "It's kinda cool seeing all my info in one place, but setting this up took longer than I expected."

- While Using AI Assistance: "It's interesting to see what the AI recommends, but how reliable are these suggestions?"

- In the Community Section: "This community feature is fun! It's like a fitness social network. Easy to post and reply, too."

4. Interview results: List the interview questions and summarize the answers to your interview questions.

1. How did you find the process of completing these tasks? Did you encounter any difficulties?

Most participants found the tasks intuitive and easy to complete. However, some users were concerned about the standards and professionalism of the training.

2. During the use of this app, which parts did you find most helpful, and which parts were the most confusing?

Participants found the personalized fitness and diet recommendations, as well as the workout tracking and motivational feedback, to be the most helpful parts of the app. The most confusing aspect was the AI, as people lacked confidence in this new technology.

3. If you could change or add any features, what would they be and why?

Some users expressed a desire for more interactive workout sessions, such as video demonstrations or live coaching. Additionally, others suggested adding a journal or check-in feature.

4. Do you think this app could help you achieve your fitness goals? Why or why not?

Most participants believed this app could help them achieve their fitness goals due to its personalized plans and motivational feedback. People had mixed feelings about the AI, with both anticipation and skepticism.

5. How do you feel about the community support features in the app?

Users generally liked the concept of community support, feeling it could provide motivation and a sense of belonging. They believed it would be a significant motivator for many in their fitness journey.

6. What are your thoughts on data privacy and security while using this app?

Most participants felt reassured about data privacy and security since the app does not collect critical personal information like names, addresses, or phone numbers. However, some users expressed a desire for a more concise and understandable privacy policy.

5. App changes: Describe the changes to your prototype that you will make based on your Wizard of OZ study.

We will make the following changes to the prototype based on the result of Wizard of Oz study:

1. Simplify the input fields and dropdown menus for height and weight to ensure a smoother and more efficient experience of data entry. This change is intended to address user complaints regarding the input field and dropdown menus interaction experience being cumbersome.
2. Provide a more concise and summarized version of the privacy policy to ensure a better understanding of these policies. Create a brief, user-friendly version of the privacy policy that highlights the most important aspects of data security and privacy measures taken by the app. Provide a link to the full policy for those who wish to read more.
3. Add a progress bar and Back button to allow users to navigate through the questionnaire more easily.
4. Add more generic categorical dietary preference options (e.g., vegetarian, vegan, gluten-free) to ensure inclusivity and better customization.
5. Improve the transparency of AI recommendations by providing explanations for the advice given and showing the data used for the analysis.
6. Implement an introductory tour for first-time users to help them understand how to navigate and use the community section effectively.
